

Smart Green Sunshade For Cars

✓ **SEYEDARTIN SADEGHZADEH**

The 16th International Invention and
Innovation Show INTARG® 2023

Human, just like other natural beings, has many needs.

It's not out of these two forms. They come from our minds or human organs (stomach or whatever). The thing we're explaining is that it's coming from the first form of Human is an emo-rational being, and one of the emotional connections is between humans and other beings (including themselves).

Let us suppose that human has a deep connection with animals (in both forms). Therefore, they have to take care

of their pet and ensure nothing hurts them Because if anything hurts them, it will also affect humans. The project- tor has a heavy weight on his shoulder to create a good place or peaceful environment for his child or pet.

One problem that makes his work too complicated is it's that when a person wants to leave the car. He has to keep his child or pet in it. (For any reason like shopping, visiting Somewhere, and so on and so on)

This has no problem on its own, but the problem begins when the heat in the car starts to rise!

Many people experience the situation from this event, their pet or child gets hurt.

My goal is to fix this unfortunate event to lift an enormous

weight from the person's shoulder from a small change.

We invented a temperature controller for cars. As it comes from its name, The goal here it's clear.

This Invention controls the temperature of the car with temperature and humidity sensors.

And when it finds out that the heat in the car it's getting high, it'll give a notification to the owner's phone (by calling or message) It'll turn on the Cooling system to control the heat.
