A Portable Heating–Cooling
Turbofan Coil Device
Using Fluid

WIPO | PCT
The International Patent System

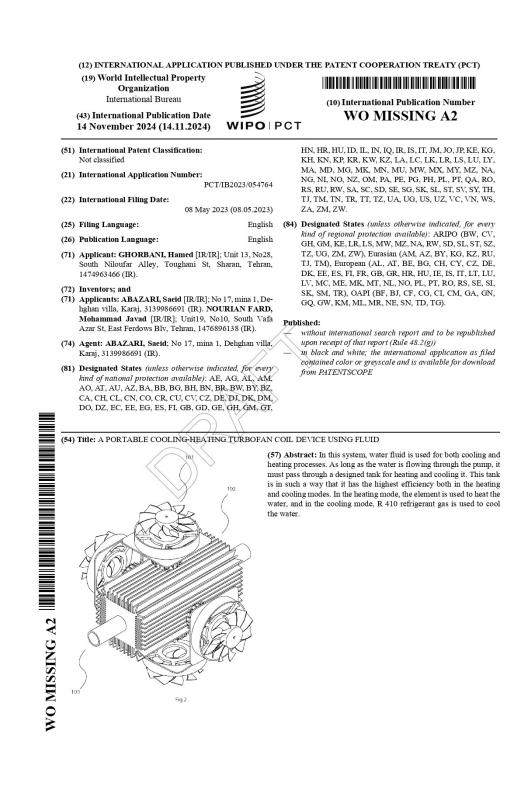

DCT/TR2022/05/176

PCT/IB2023/054764

In this system, water fluid is used for both cooling and heating processes. As long as the water is flowing through the pump, it must pass through a designed tank for heating and cooling it. This tank is in such a way that it has the highest efficiency both in the heating and cooling modes.

INTARG

In the heating mode, the element is used to heat the water, and the cooling mode R410 refrigerant gas is used to cool the water
