IMAGE COPARISON SYSTEM FOR CAR行車 影像比對系統 1787888

At present, most vehicles are equipped with driving recorders, but the current driving recorders can only store the images captured by this vehicle.

Innovation value

1. The driving image comparison system of the present invention can instantly identify the object characteristics of other vehicles in the driving image of the driving recorder.
2. The driving image comparison system of the present invention can capture surveillance images of predetermined road sections monitored by highway monitors and identify object features of other vehicles to obtain object information.
3. The driving image comparison system of the present invention can identify the monitoring image of the predetermined road section monitored by the highway monitor and the driving image of the driving recorder passing the predetermined road section.
4. The driving image comparison system of the present invention can store and display the license plate numbers of other vehicles in real time.
